Read this definition of "tethering", then write a short definition (20/30 words) in your own words.

Tethering refers to connecting one device to another.

iPhone Tethering is a technique in which an iPhone is used as a wireless modem to provide Internet access to a computer or other Wi-Fi-enabled device, like an iPad or iPod touch.

Tethering is a general technique available on many cell phones and smartphones that can access the Internet. With the right software and data plan from a cellphone carrier, it allows the user to connect their phone to a computer and use the phone's connection to provide wireless, always-on connectivity to the computer. The iPhone supports tethering via Wi-Fi, Bluetooth and USB. Tethered connections are generally slower than broadband or Wi-Fi connections but are more portable. Tethering also often requires a monthly data plan subscription in addition to the standard phone contract.
